The table below refers to the problems identified in the stage 5 report that we received, where the more detailed description of the problems can be found.

The new apk can be found at:

<https://drive.google.com/file/d/1P0D4rUn1WfsIFXrMFyzEU9BTiYqTU5PC/view?usp=drivesdk>

No.	Problem	Proposed Solution	Our opinion	Fixed / Implemented?
1	Account button opens sidebar	Change the icon to a more standard one, like the broadly adopted triple-line menu icon.	We agree with the problem and the proposed solution.	Yes
2	Content of the sidebar in the “Maps” section	Remove the side-bar feature.	We disagree with the problem. Having a side bar allows the user to access those options directly from the map screen, and allows for more flexibility and efficiency of use.	N/A
3	Icons for the same features are different in different areas of the application	Use the same icons for the same buttons.	We agree with the problem and the proposed solution	Yes
4	Unnecessary “Login” option in the sidebar	Instead of a “Login” option, display a “Logout” button .	We agree with the problem and the solution.	Yes
5	Unclear search filter	Explicitly define what the filter controls, or make it a “two handle” slide where	We agree with the problem and the solution of clarifying that it represents the maximum distance,	Yes

		the user can control both the minimum and the maximum distance.	but we don't think the minimum distance would be very useful as it defeats the purpose of this functionality, which is finding nearby points of interest.	
6	Inconsistent search filters	Pick a currency and use it throughout the whole application , or offer the user the option to choose what currency to be displayed.	We agree with the problem/solution (we changed everything to Euros, but in a complete application it would be a better solution to let the user choose the currency to be displayed)	Yes
7	Functionality inconsistency	Make the button open up a side-bar or remove that feature completely	We agree with the problem and solution, this was something that was planned but was not completed.	No
8	Unclear button purpose	Remove the button if it really doesn't do anything or make its purpose clear.	This button was supposed to open the location on the map, but this feature ended up not being implemented in this prototype.	No
9	Inappropriate icon	Change the events icon in the sidebar to the same events icon in menu	Same problem as #3	Yes
10	Poor feedback on adding a place/event to a collection	Add a notification stating that the place or event was added to collection X or a pop up mentioning that a place or event was added to collection X with	We disagree with the problem as we do have a notification in the snack fold informing the user that the place/event was added to the collection	N/A

		a prompt to go back		
11	Lack of noticeability in shifting between locations and events in a collection	When selecting a collection show all that is stored there(events and locations) and have the ability to filter between events or locations.	We don't think our design is problematic but the solution that would show everything and filter it through selection could be an interesting solution to explore	No
12	Poor feedback on adding a review	Add a notification stating that review was added to about location or event X or a pop up mentioning that a review was added to location or event X with a prompt to go back	Same opinion as #10 but for reviews	N/A
13	Confusing on filter application	Add a completion button	The filter page for the locations has an "Apply" button, however the events filter page didn't (only a "close" option), so we fixed that to make it less confusing.	Yes
14	Layout application	Comply with a standard layout	We are not sure if we understood the problem described, but if it's the fact that tags are different in locations and events, it is because locations and events have different tags to filter by. Other than that, we already fixed the problems and inconsistencies related to the filters page described in problems #5, #6 and #13.	N/A

15	Not clear what the "Write review" process looks like	Add a view previous reviews button	We didn't have time to implement the page to view reviews of a place, but we agree with the problem and the solution	No
16	Unnecessary information	Add a label where a user can see if there are or not events (in this case take out the non existing event)	We disagree with the problem as having the user see that there could be events but there is no event happening at the moment on a given location is useful information to give, and also having this section in every location adds to the consistency of the layout	N/A
17	Interacting system for possible doubts	Add a page with settings and help	We agree with the problem and solution however we didn't have time to implement it	No
